Whatchamacallit ?

How we see the world is decided by how we see the world (physically).

About Vision:

**HUMAN** → Forward (3D).

**Herbivore** → Two sides

What if → Change the vision of human?  
What can we see?

Vision was divided into 2 parts

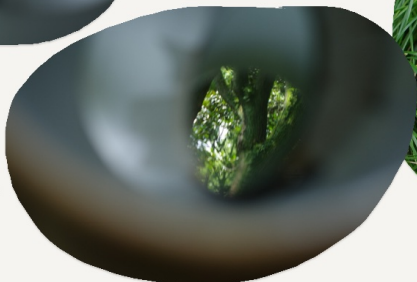

What's underneath?

# Interesting division of Vision.

③

Quite dizzy & weird when I see things in the sky & on the ground at the same time.

## Overall feeling:

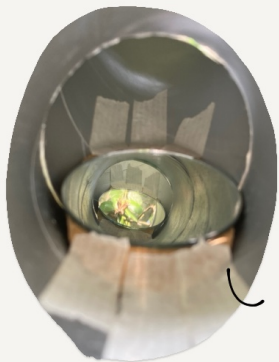

晕车的感觉

A little bit dizzy 晕晕的

But it made me able to see the things in a different perspective.

Surprisingly, it would change my sense of distance, and actually make me focus on things appear inside of the frame.

P.S. I actually didn't feel uncomfortable about people's curiosity, I kinda enjoy it. It was great that people would love to have a try!!!

Something high on the branch.

\* Invite my mom to have a try  
↓

\* Little story:

What are you doing?  
Trying it!  
Wow interesting  
An old man
