

# Analysis of my exploration

In the **last exploration**, I walked a long way, and I was actually in the process of "a cursory trip" (in Chinese I would say "走马观花"), looking for things that caught my eye, such as brightly colored beetle body, peach gum on peach tree branches, or anything **strange, uncommon**. I mostly use words like "interesting" to describe them. In fact, I didn't realize that this was still an exploration from an **"anthropocentric perspective"**, because in a sense it was satisfying a certain "taste" of mine, like curiosity or something like that.

And the **tools** I used in **Exploration #1** are just my **naked eyes**, and a **camera** that records what I see in front of me. In fact, the second time I went to Luxun Park gave me a completely different feeling. Because of "the power of nature", we are actually very small in the face of **heavy rain**. I seldom use my phone during the exploration because of the heavy rain.

## EXPLORATION #2

I will spend more time in each location because of the difficulty in moving, **sitting on a rock**, feeling the coolness of the water, seeping into my pants, reaching out to **touch the trunk**, feel the speed of the water flowing on the trunk, hear the rain falling and slap on the raincoat due to gravity, and the **amplified sound**, feel the **rhythm** and speed of "dropping/falling"... As a person who did not like rainy days in the past, I also felt the peace & pleasant sensation of staying in the rain with cat in the park, which is a rare experience!

the process of making whatchamacallit inspire me to explore the nature in different perspective

I even found some connections between this exploration and the last time, these are some **keywords** (maybe there is no deep logical connection)

- Falling (Raining/Dropping fruit) /Flowing
- Gravity - physical force
- Temperature perception
- Rhythm
- Changes in timeline

Nature to me is now more than creatures, green, ecosystem, etc.

The **causes and actions** behind it are also very important, such as falling due to gravity, speed, rhythm, etc... These may be other nature-related connotations hidden behind
