

Something winding on the plant
"PARASITISM"?

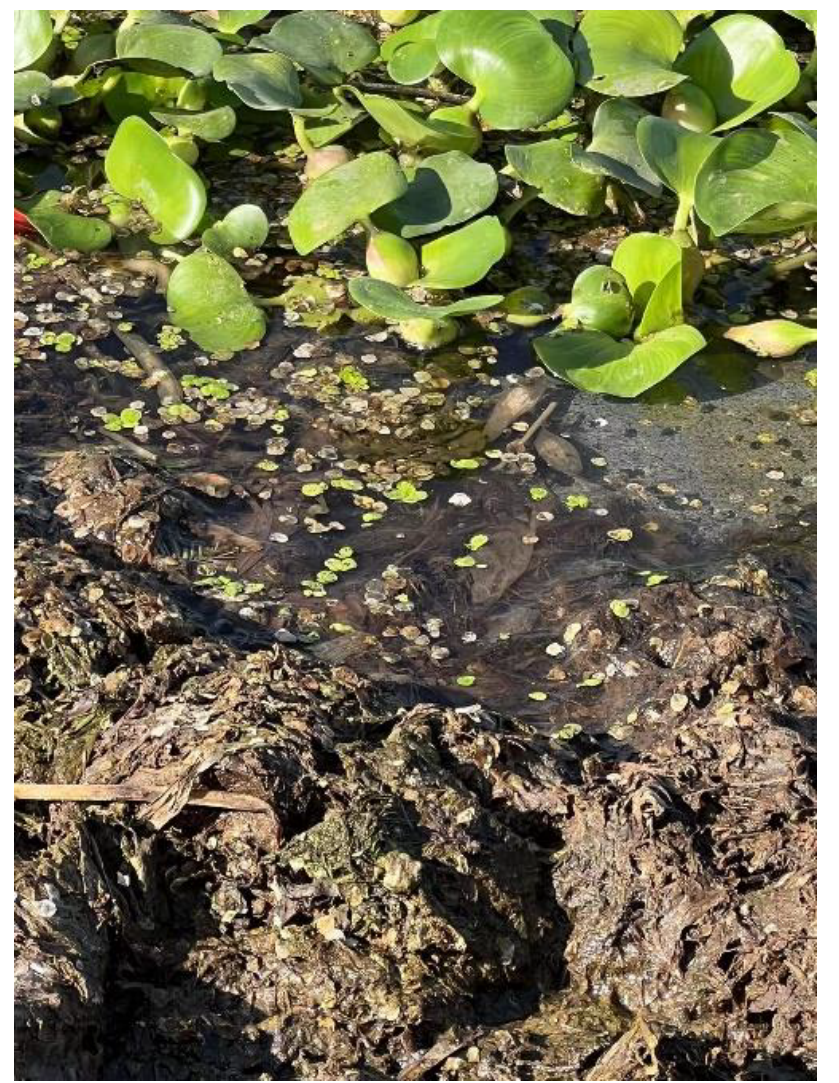

Hard to cut
it down

"CLIMBING PLANT"

PLANT HERE NEAR BY
A SHORE

SOME WILD, MILD, WET
SOIL EVERYWHERE

Cotton like

NEW LIFES

WORM

WHEN I TURN OVER THE TOPSOIL

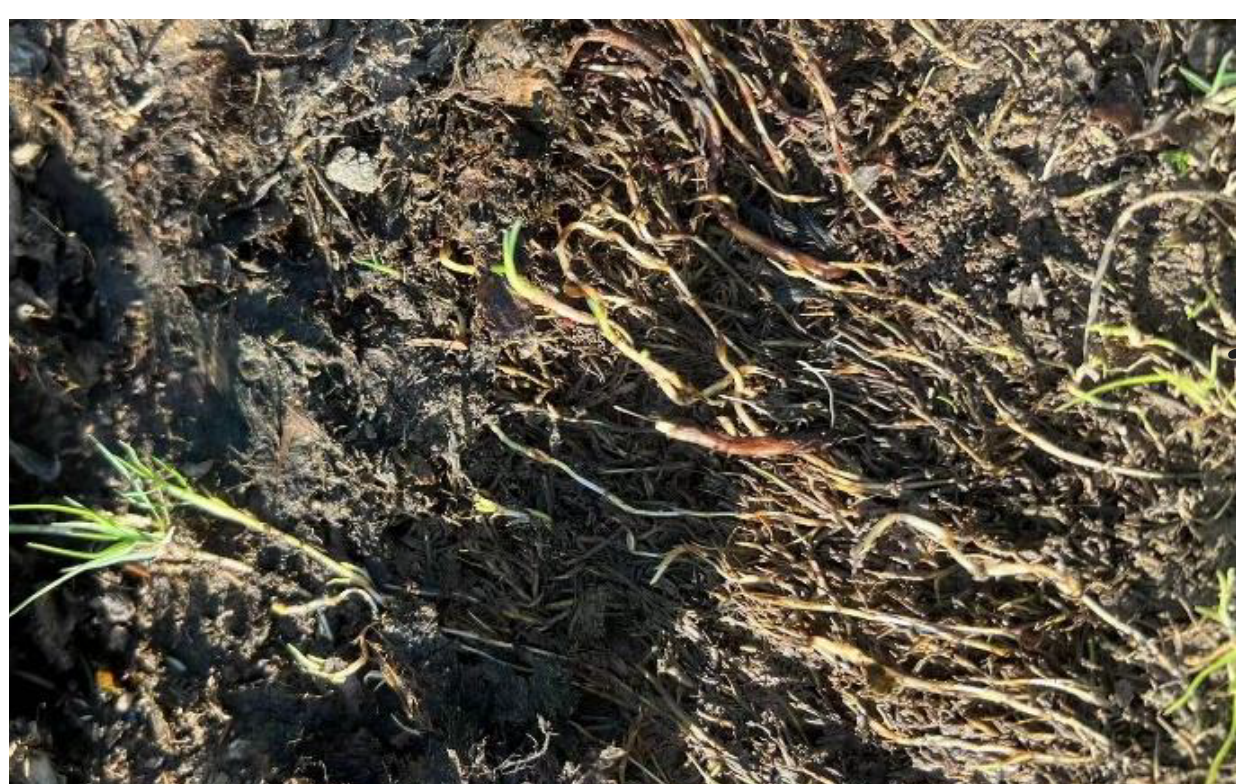

SAILS EVERYWHERE

seems they live in such places, and they blowing with the wind and floating with river ^_^

NEW LIFES UNDER THE "DIRTY SILT"

I'm wondering if this could damage their growing?

SEEMS LIKE REEDS ROOT DEEP INSIDE THE SILT

DON'T KNOW WHAT THOSE COTTON LIKE OBJECT IS, BUT THEY ACTUALLY PROTECT INSECTS AND SNAILS.

BEAUTIFUL STONES WHICH IS TRANSLUCENT AND SMOOTH.

PLASTIC EVERYWHERE

FARMING INSIDE CITY

Seems super cool because people who grow those vegetables can live in 2 different lifes.

people here talking and laughing inside the farmfield

And they are not afraid of any insects inside the soil and the grass that can cut people, they dress casually.

T not like me ↓

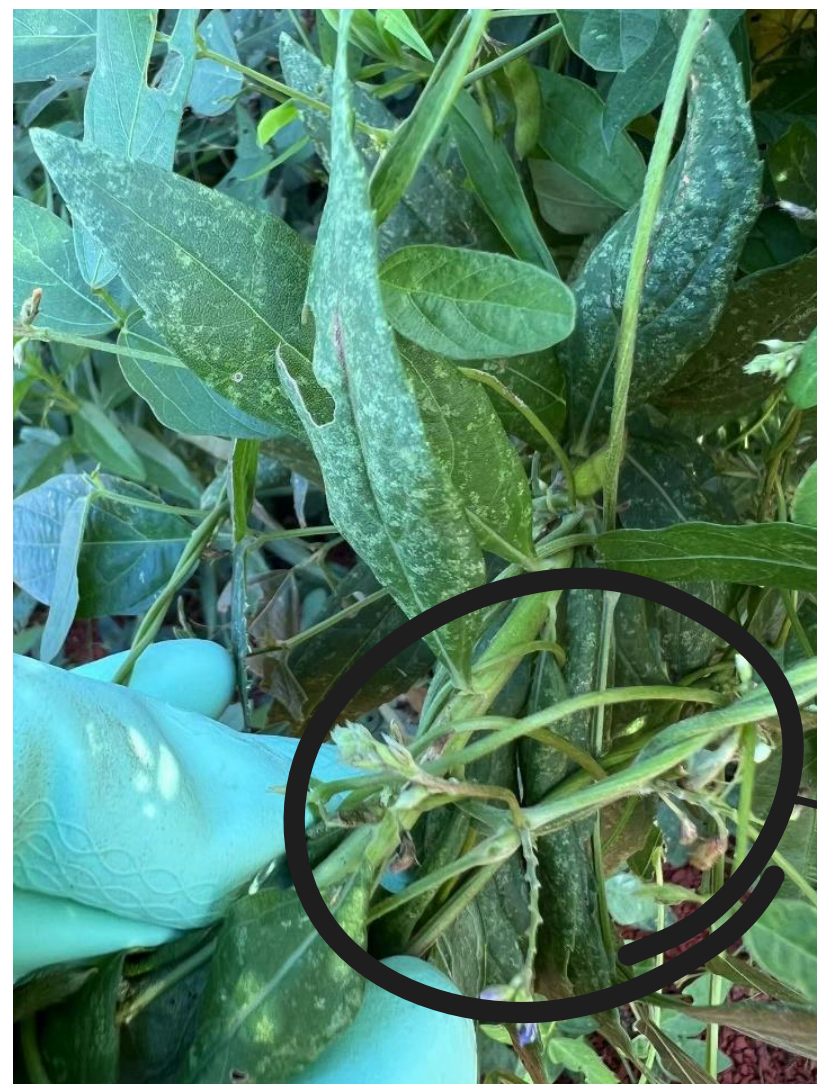

HAT: afraid of Sun Shine

GLASS: BAD EYE SIGHT

MUSK: afraid of dust

gloves: afraid of insect & Soil

WHY DESIGNER BE SO SERIOUSLY?
(me)

DEVIL !!

wandering if they

(can take benefit

from the plant they climb?)

A PLANT TRYING TO CLIMB ON ANOTHER PLANT

WHĀCHAMACALLIT

I saw there were ants collecting foods

⇒ and I put a foam paper first along their way

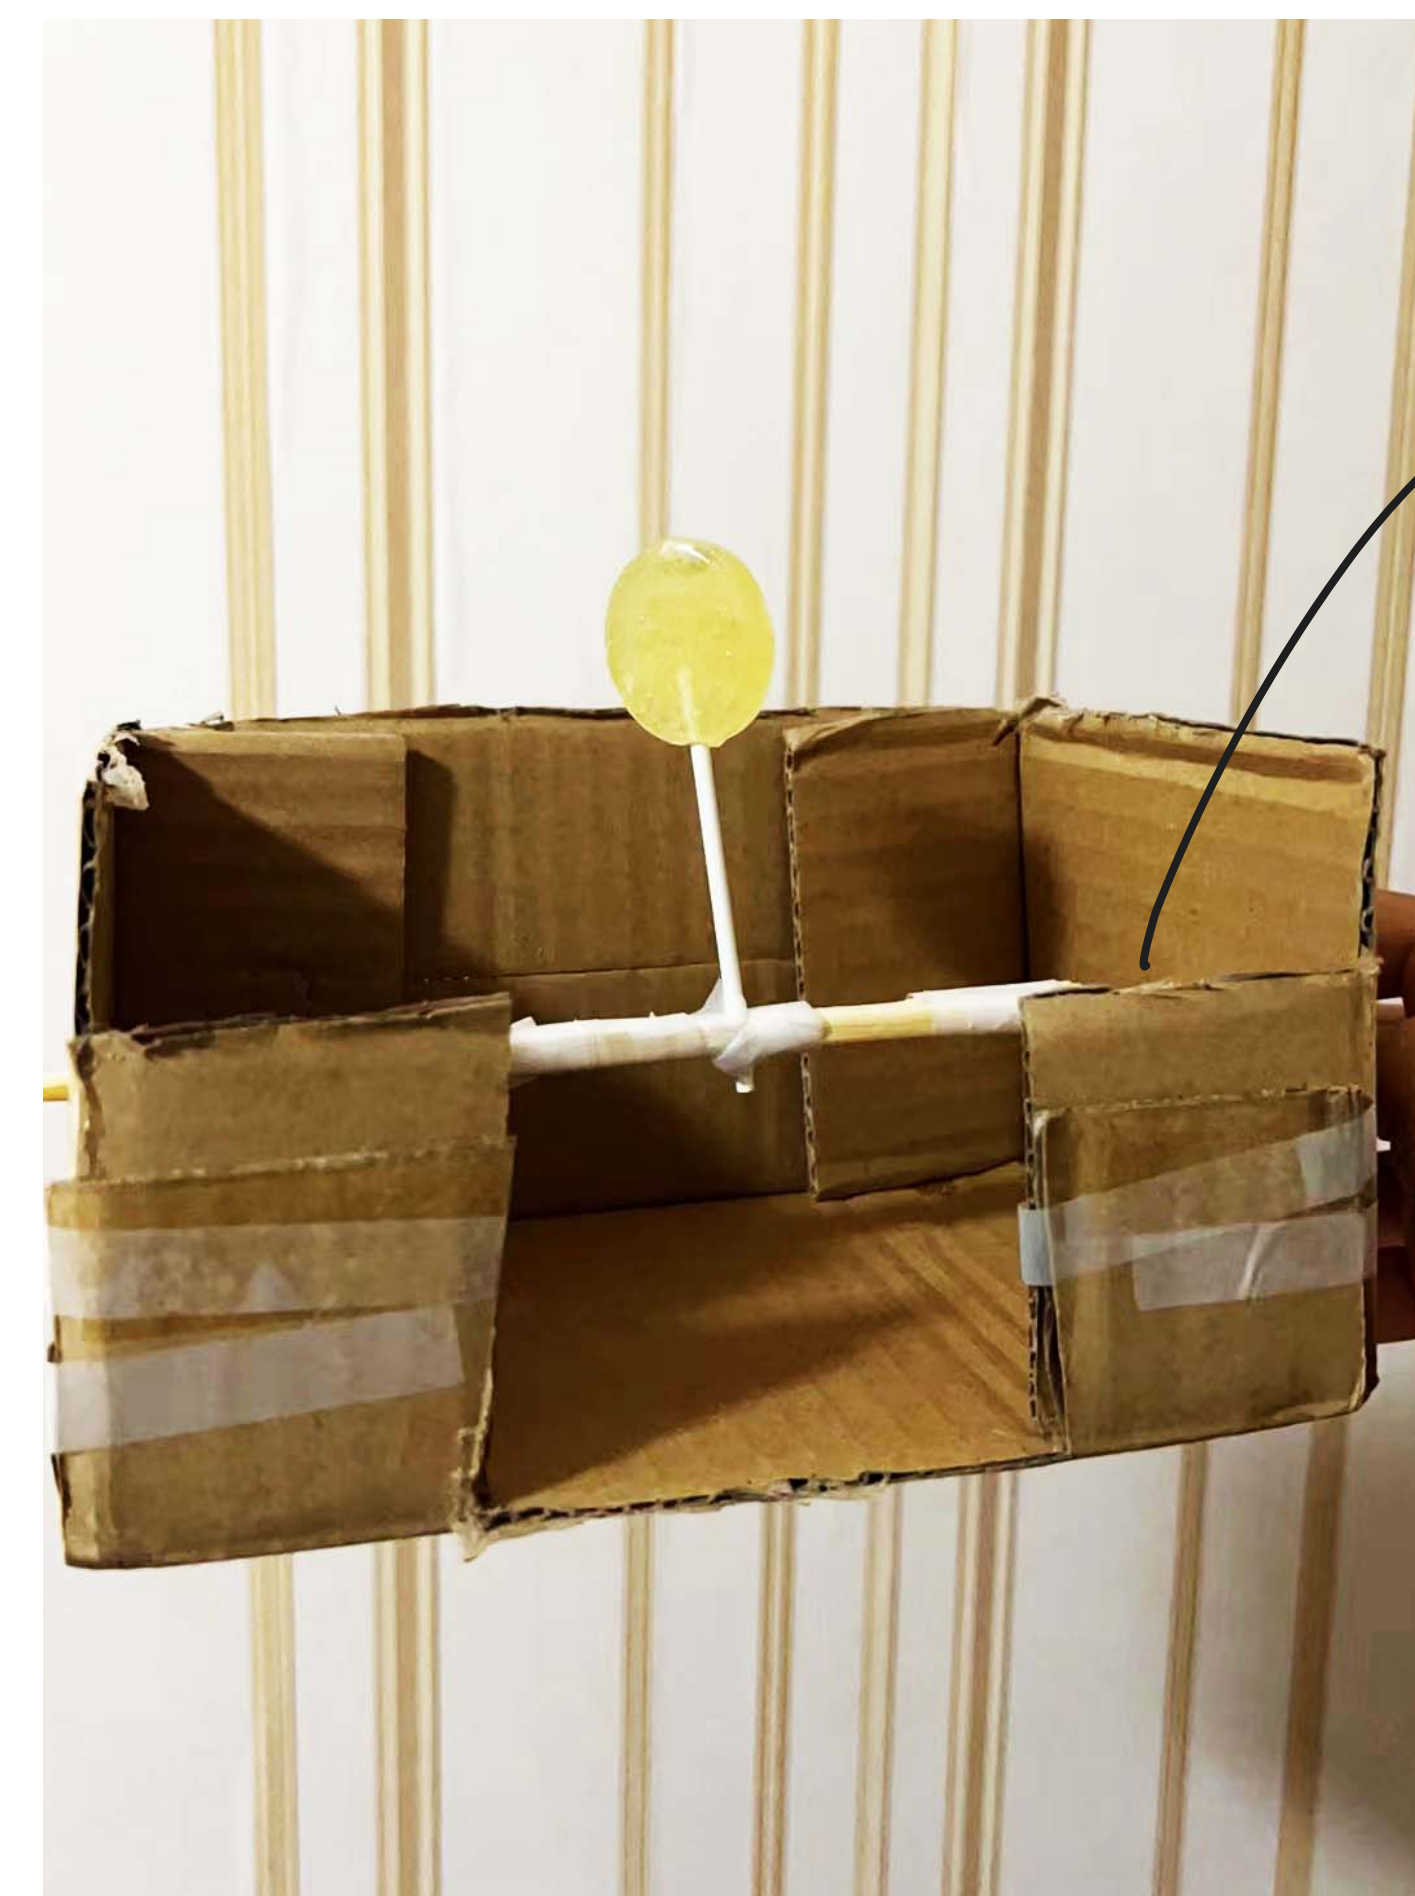

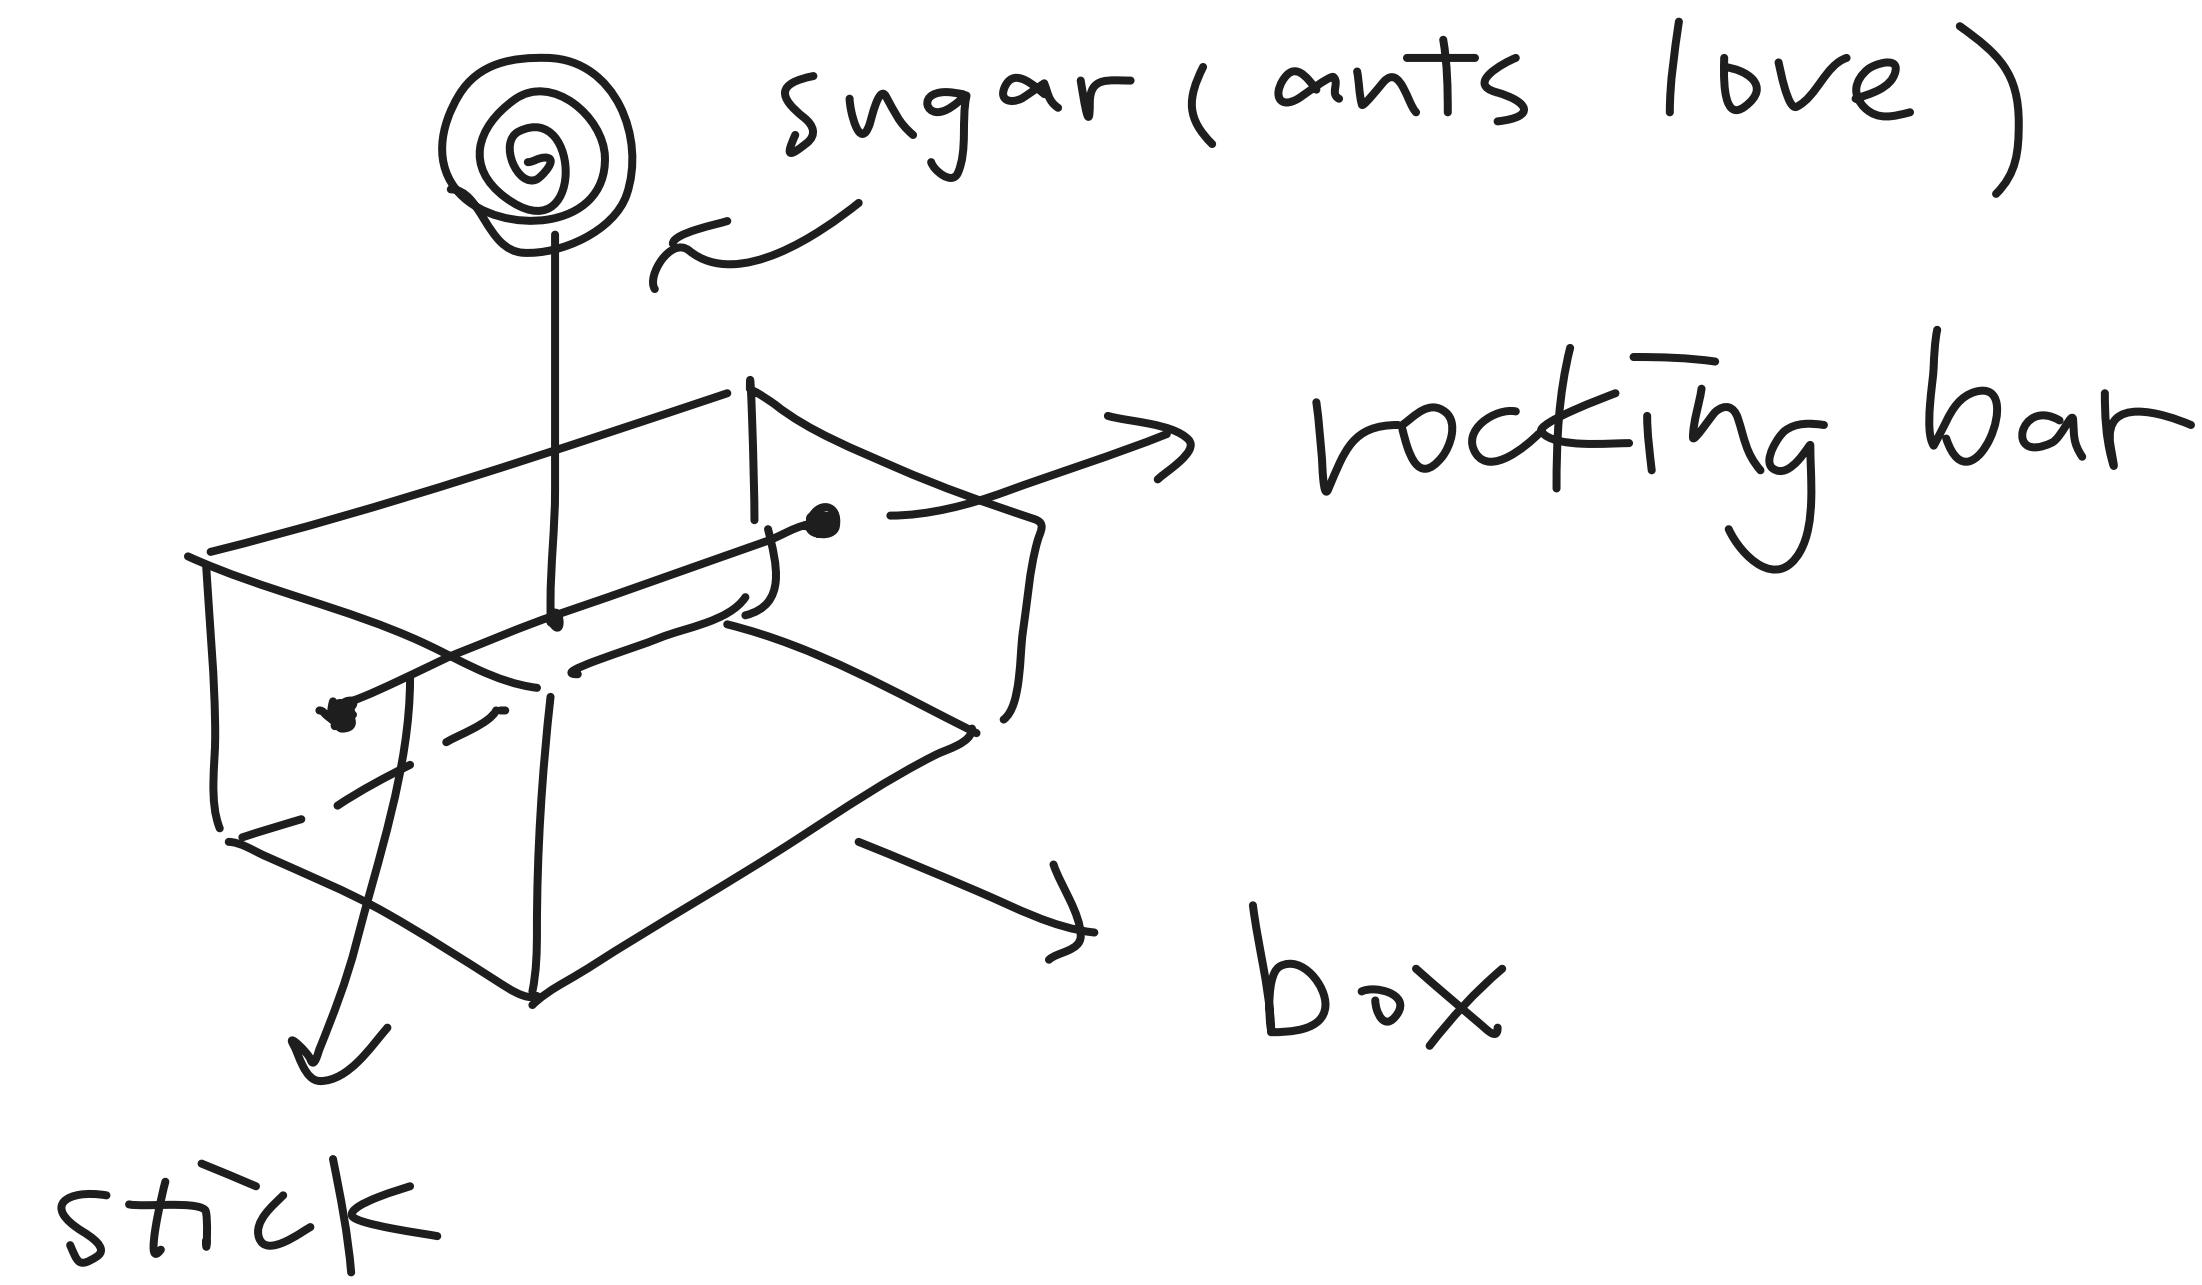

and try to change their route.

But they seems will not be bothered by anything..... It means they can not recognized that things have been changed by others. they can just go with the situation if the route is bumpy or not in a normal way they can not recognized! ASTONISHED!

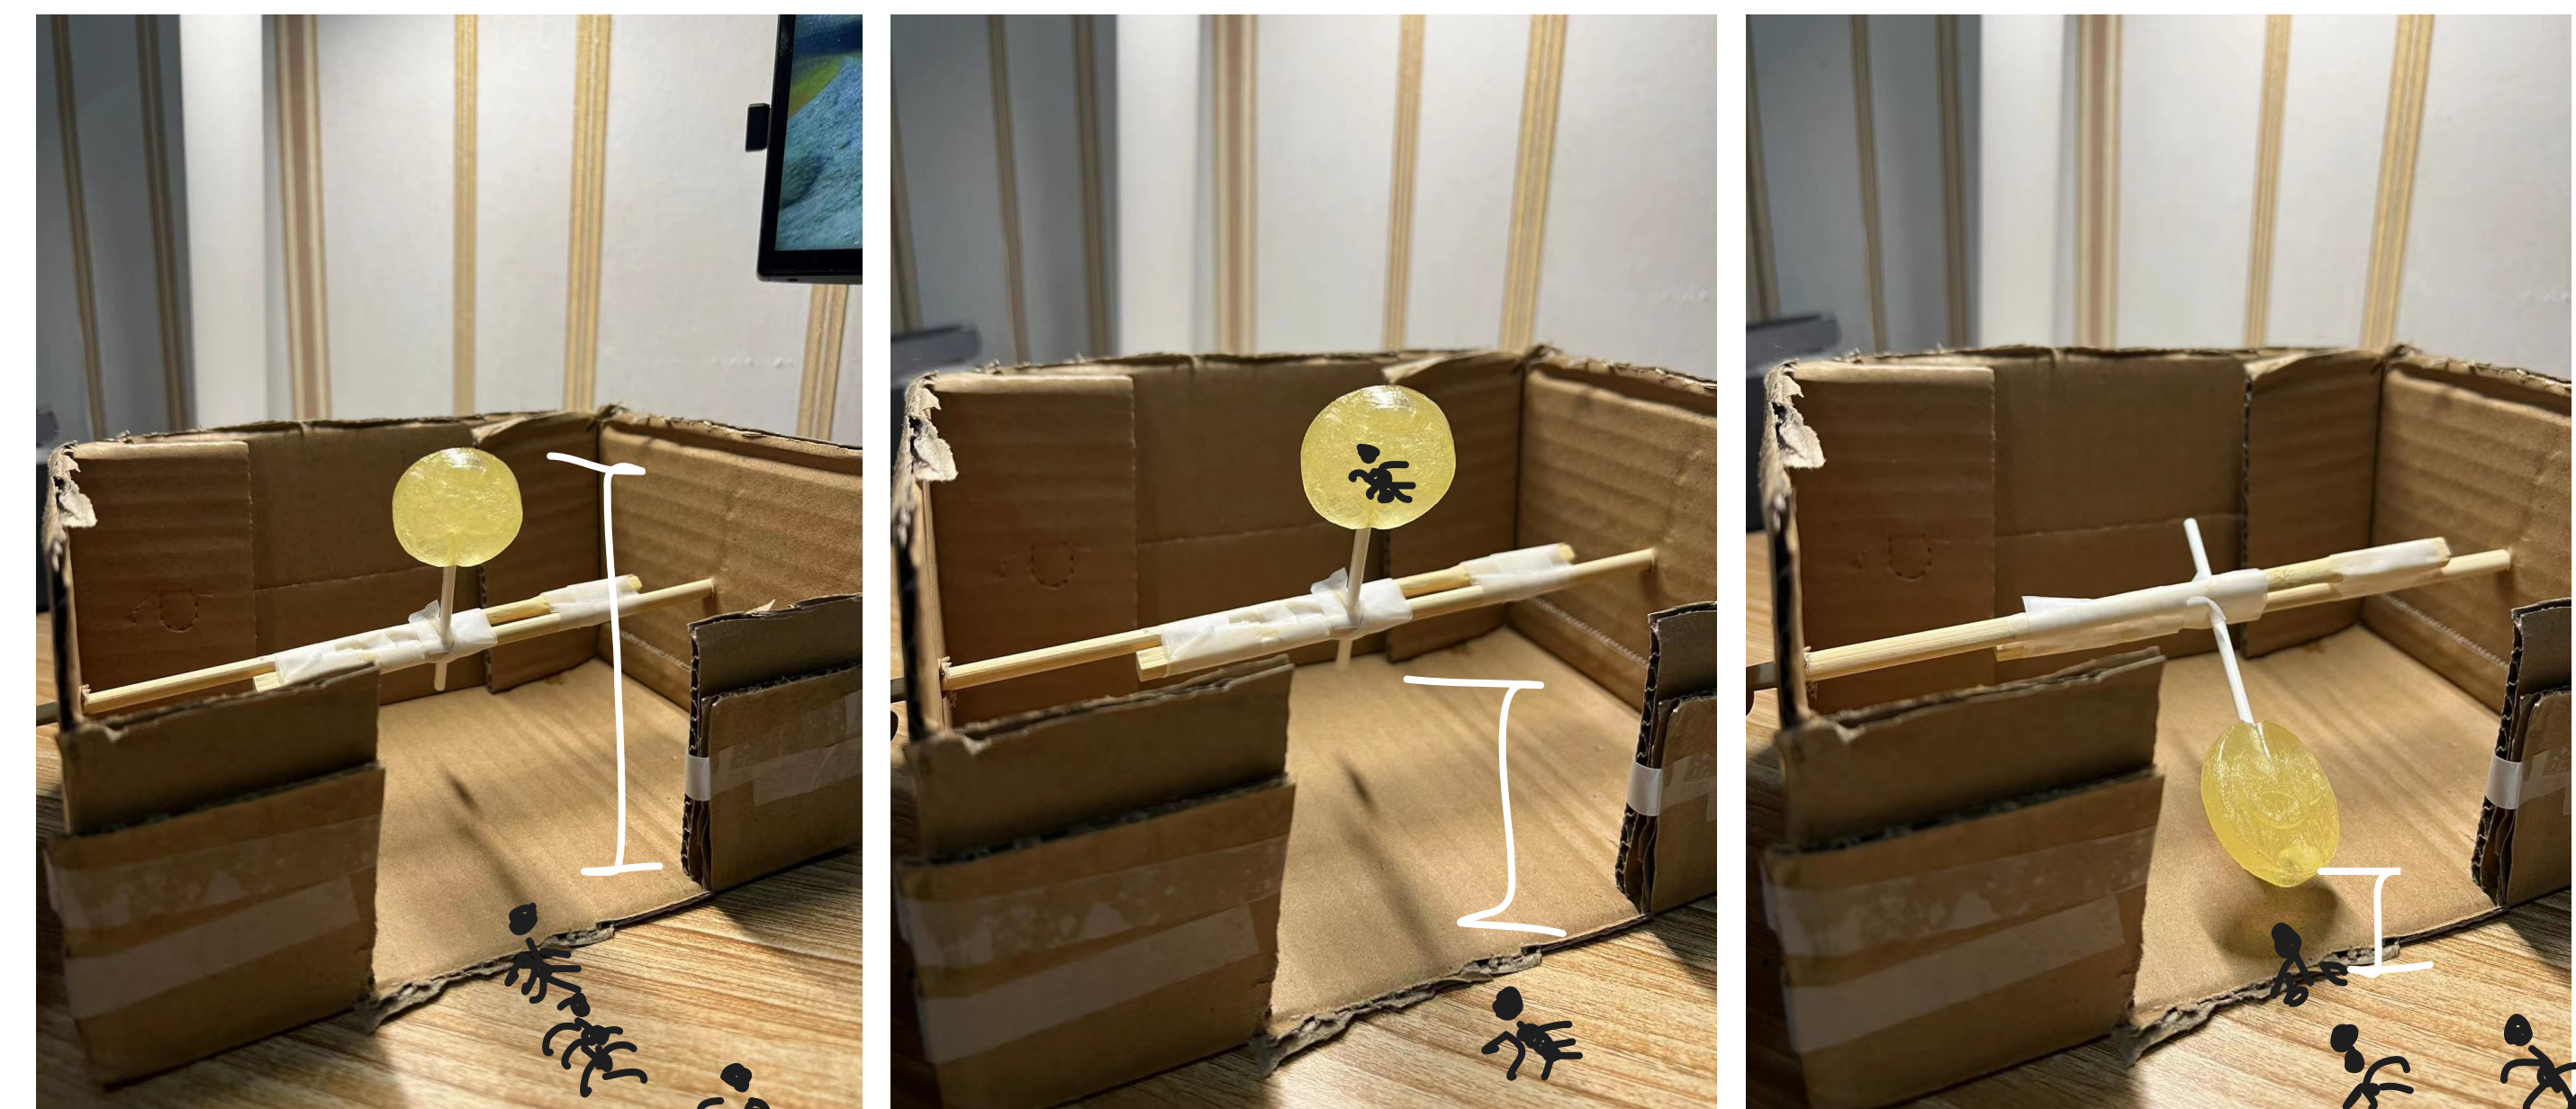

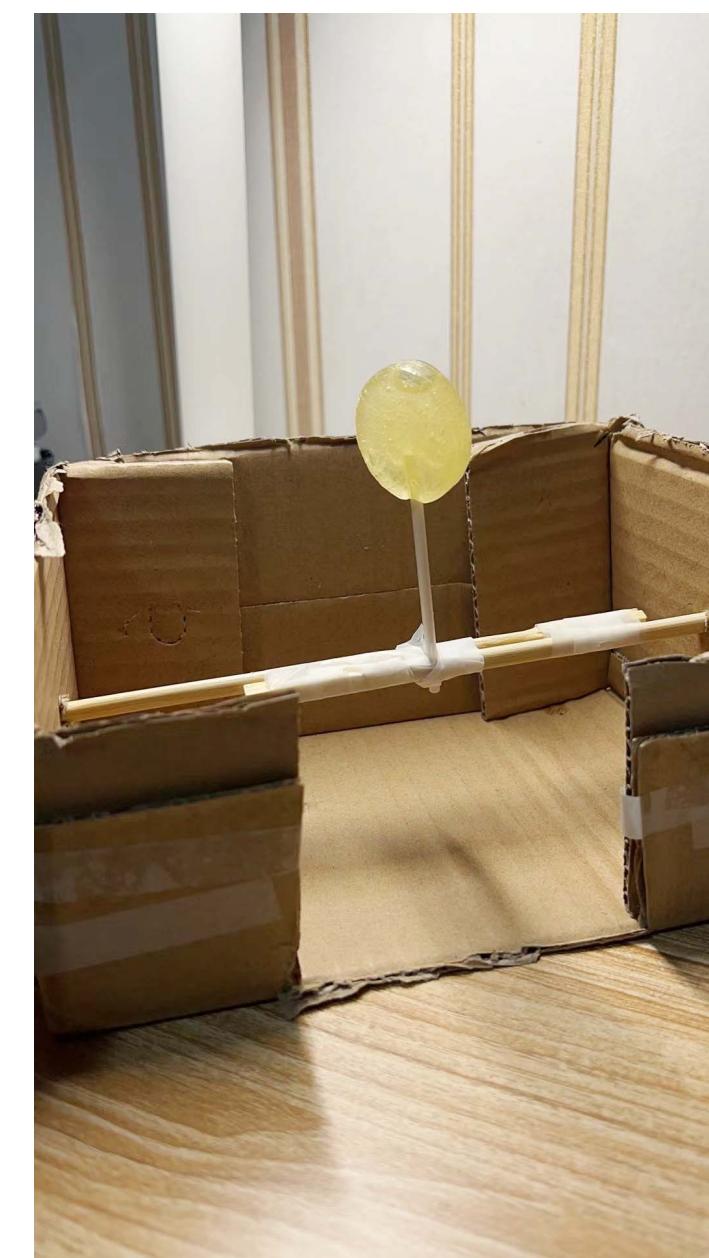

AND I sooner remember that a scientific novel has said that ants are two dimensional creature they can not see or feel any 3 dimensional things so they can climb upside down and ignore any change of the world of three dimension!

So I was wondering if there are some ways for ants to feel the third dimension?

As we all know that the third dimension is the "DEEPTH" so why don't we made a tool to help ants know depth? So I design this:

to roll this bar to give sugar to ants

give this height as a sign to ants

INSIGHT

I can turn the stick to make the candy appear in front of the ants. If the ants climb onto the candy, they will have a height difference from the previous position. Maybe they can realize that they are at a different height. This way may break their understanding.

So I may think that people are also three-dimensional ants? Because many physical laws that humans think are "scientific" things, there is no way to explain their cause and effect. Is it a way for higher dimensional species to amuse humans, like this small tool that will appear in front of ants according to my mood? We cannot know what is happening in the wider universe, and we may never know the truth.
