Whatchamacallit — Sun stimulator?

Conclusion

- The sun is one of the most essential part of nature, it is like the mother of every creature. But I have never truly enjoyed sunlight before, because of worrying about sunburn and my skin would get darker. But today when I stood under the sun and tree shadows, I felt like I am also a tree. And I was growing taller and stronger, which was actually the gift nature gave us.
- I discovered how the sun interact with different nature objects, how the light passed through/ reflected by/ absorbed into leaves, meadows, human's hair and hands, and created various shapes of shadow and shining dapples. Also every object seems to have emotional feedback to the sunlight : some plants and old people like it, while some animals (like snails) and car owners dislike it.
Anyway, I like it more than ever.
