

① Colors

* Tool: WhatChamcaLit

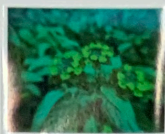

Green: Focus on non-green colors.

Red: Separate warm & cool colors.

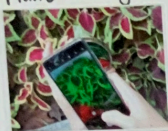

△ Flowers that change color during their bloom.

马缨丹
Lantana camara

△ Plant with green ring on the leaves.

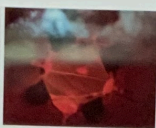

五彩茄
Coleus blumei

△ Others

The connection parts of leaves & branch are a bit pink.

It's easier to spot wormhole under red filter.

- Plants are actually very colorful.
- Get closer look ⇒ See details of structure ⇒ Then may have interest of its species.

□ How can birds/insects see?

② Zoom in - Trace of insects

👁 See △ We notice them when they move.

Slug on tree Slug's mucus?

👂 Hear

△ Sound of bugs underground.

Stop when people approach.

△ We may take it as background music...

earthworm

Spider net

Who bites it? Or illness?

□ What's it like at night in the park?

③ Relationships

@ Free space

Grandparents feed sparrows with snack (When their kid is having breakfast)

@ Pavilion by the lake

Sparrows living between the roof

* Pavilion is a popular chocking place for elderly people.

* They get used to sparrow's sound, but rarely notice there's nest inside the roof.

@ Zoo

* Children come to park as they don't see so many animals in daily life.
* Parents take this a chance to educate.

△ Change of perspective?

What we see.
A bush

What sparrow may see?
A maze??
