

⑦ Settlement

⑥ Demolition ?

⑤ Road - rust & cracks

④ factory - iron wall

③ stores - Crack

② High school - ground

① Park - color

A state Rainy Day

HONGKOU DISTRICT

YANGPU DISTRICT

Huangpu River

Huangpu River

Huangpu River

① Park Area:

Color of plants is well-managed, between Green, Yellow, Orange and more. It reminds me of my experience in Vancouver, there is more color like white, purple, red [LATITUDE]

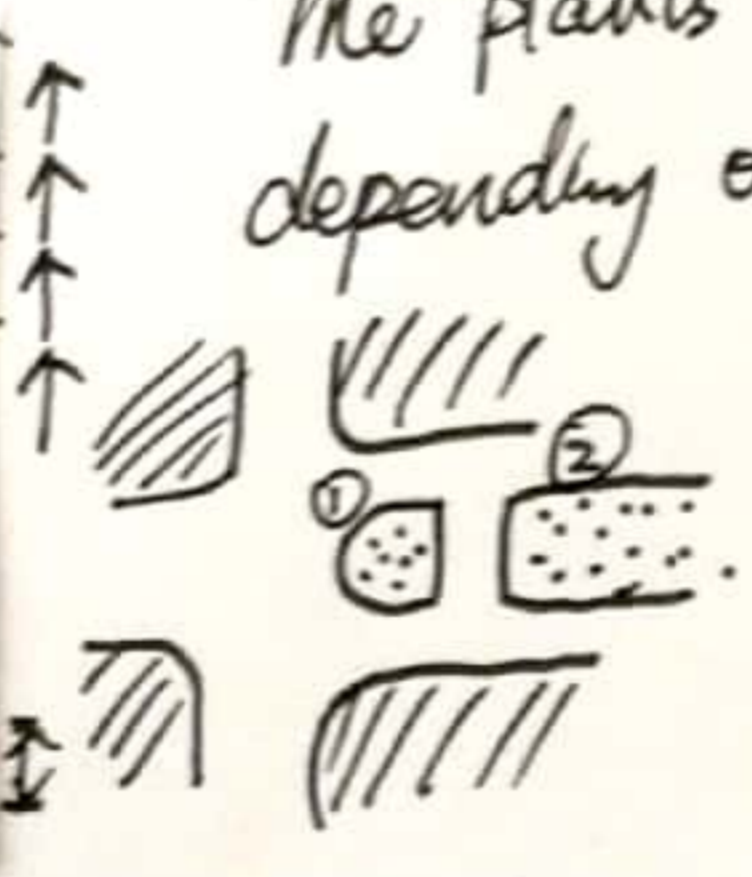

Relationships of Greens and people
High in open area
Low near buildings

like wall

② High school Area:

The plants in the centre of the roads are different depending on human's vision

- ① Lower than people
- ② Higher, and multiple layers

Cracks: Pavement is covered by bricks, the weeds survive in the cracks of bricks.

Falling leaves also contribute to the survival of weeds

③ Stores Area:

cracks = Weeds

④ Factory Area:

The Growth of plants is wild and beyond human's control.

⑤ Road Area:

Time has left trails and signs of human activities. Although they are man-made, they still "grow" naturally.

⑥ Demolition Area:

↳ bare

Greens in the city are organized by human.
Are these kinds of greens NATURE?

⑦ Settlement Area:

Gradually changing color

The Rain make buildings different from normal situation.

↳ dark
↳ bright

⑧ Nature with me
